

# Ruby on Rails

## Lab Exercise 3

1. Create an application with a View called foo.html.erb that displays "Hello Foo" on the page. Create the View by creating the file and the appropriate entry in the routes file.
2. Create a Model for recipes. What fields do you use and why?
3. Create a Controller for the model recipes that you created.

### Questions:

1. What is a Model used for?
2. What is a Controller used for?
3. What is a View used for?
4. Describe the MVC relationship in your own words.
